▶ Primary and Secondary School

One of the most popular arenas for digital presenter use is education settings, where experiments in chemistry and biology, for example, must be demonstrated to large students. Teachers can immediately utilize the digital presenter as an advanced overhead. And they are immediately comfortable with it that way. Using the digital presenter, teachers can display the real world examples or student work for evaluation by the class as well as use the draw features to highlight, underline and write on documents that are displayed. Students in the back of the room are able to see what the teacher is trying to show them. Thus the students are much more engaged and involved in the learning process.
