▶ College and University

This presentation device can display documents, images and 3D objects in the lecture halls for instance, which seat 100 or more audiences. Since lectures can include 8.5 x 11-inch documents printed in minuscule 8-point type, details from charts, books, 3D objects and more - some of which may be almost invisible to the naked eye - the presentation device have to be able to magnify images. Digital presenter is easily the best solution. In addition, since the digital presenter output is live video, the device easily supports video-conferences and distance-learning programs.
